EDIUS X

Software Version 10.34.10198 – Release Notes – February 2023

New Features

EDIUS

- Added hyperlinks to FAQs in the error message dialogs related to the license
- Data format of export presets has changed to provide more flexibility to SDK users
  * Functionality for export presets remains the same
  * The suffix has been changed from .tpd to .expd
  * Old presets are still importable
  * Old builds of EDIUS X (10.34.10112 or earlier) cannot import new .expd presets
  NOTE: Click here for details: https://www.ediusworld.com/support/faq/7554.html

Mync

- Added hyperlinks to FAQs in the error message dialogs related to the license

Fixed Issues

EDIUS

- When Bin file conversion is done to multiple clips whose frame rates are different, displayed frame rates of created clips are wrong.
- Bin file conversion does not finish properly if the frame rate is changed.
- Width of marker thumbnail column resets every time project is opened.
- When exporting a clip with changed frame rate and with [Add to Bin] option, the added clip's frame rate is incorrect.
- It takes a long time to display prefix list on S3 Exporter if there are many prefixes (EDIUS Cloud only)
- Occasionally EDIUS does not close properly

Mync

- Occasionally Mync does not close properly
