
EDIUS 11

Software Version 11.11.14054 – Release Notes – April 2024

Important: Please note that when updating to EDIUS 11.10 or higher, you also need to update VisTitle (Express or full version) to version 3.100. We strongly recommend using the [EDIUS 11 Setup Manager](#) to do both updates at the same time. If you do not want to use the EDIUS 11 Setup Manager, you need to install the VisTitle 3.100 Update manually ([Link to the VisTitle 3.100 update](#)).

New Features

EDIUS

- Optimized Multicam Workflow: A feature to edit the clip property "Reel Name" for multiple selected clips in the Mync window has been added. For example, you can assign the camera name (camera 1, 2, 3 or long shot, left, right...) as the reel name. This enables EDIUS to assign the clips to different camera settings and to synchronize them via multicam audio sync.
- Support displaying CEA-708 closed caption contains double-byte characters
- Improved performance when multiple clips are selected in the Bin window
- General improved performance (by updating the Hub database)
** There are precautions when downgrading to 11.10 or earlier after upgrading.
See [here](#) for details.*

Mync

- Optimized Multicam Workflow: Change the clip property "Reel Name" for multiple selected clips in the Mync library
- General improved performance (by updating the Hub database)
** There are precautions when downgrading to 11.10 or earlier after upgrading.
See [here](#) for details.*

Fixed Issues

EDIUS

- The format settings do not appear on the "Burn to disc" dialog (SFDC00878000)
- In the German edition of EDIUS, some terms in the "Burn to disc" dialog are incorrect
- Even though a file is dragged and dropped on any folder in the Folder View, it will be added to the current folder
- Occasionally render or export fails when the Mask filter is used (SFDC00872701)

Mync

**No fix provided*
