EDIUS 11

Software Version 11.51.22591 – Release Notes – November 2026

New Features

EDIUS

- Improved the performance of VST3 plug-in detection by using a cache
  **You can also perform a full detection without using the cache.*
- When entering tags in the Properties pane of the Mync window, tag suggestions are now displayed regardless of uppercase or lowercase letters
- When the search results in the Effect Palette are cleared, the expanded state of the Effect Tree is now restored as much as possible
- Improved the display of the Properties view for clips with many markers
- Improved the error messages that appear during importing sequences to make the reasons for the errors clear

Mync

- The Field Order, Frame Rate and Aspect Ratio set in the Properties pane are now used for transcoding
- When entering tags, tag suggestions are now displayed regardless of uppercase or lowercase letters

Fixed Issues

EDIUS

- When the folder for storing voice over files does not exist, the voice over stops without any error message (SFDC00942280)
- Changing window colors hides context menu items added by third party plugins (SFDC00944272)
- EDIUS takes a long time to startup if there are lots of jobs (SFDC00943711)
- When exporting the timeline, the resultant file will include checkerboard footage if the timeline contains sections where rendering is in progress (SFDC00946991)
  **You can now choose whether to use the original version instead of the portions currently being rendered, or to cancel the export for such a case. See here for details.*
- The display within the Job window or the GV Job Monitor tool occasionally becomes unreadable

- There are cases where the name of a Bin clip does not revert to the default name when the current name is cleared
- When importing sequences, there are cases where EDIUS does not detect the differences in settings between the source project and the current project properly
- The “Cancel” button does not work during audio sync of multicam editing
- Occasionally the frame of the GV Job Monitor tool is invisible

Mync

- The display within the [Job Monitor] tab occasionally becomes unreadable
- There are cases where the [Job Monitor] tab is displayed in the OS language instead of the specified language
- When view mode of the Thumbnail pane is changed twice, the Thumbnail pane is not updated properly
